

Roberto André Mossi Milla

Full-Stack Software Engineer | Product Development | Cloud Applications

mossiroberto0392@gmail.com | +1 (814) 790-1591 | [linkedin.com/in/andre-mossi-803765236/](https://www.linkedin.com/in/andre-mossi-803765236/) | github.com/AndreM222 | andremossi.vercel.app

Summary

Full-Stack Software Engineer building production web and cross-platform applications from frontend architecture through backend services, databases, authentication, cloud infrastructure, and deployment. Experience delivering systems that automate manual workflows, including applications that reduced processes previously requiring days or weeks to minutes. Additional experience integrating AI services, computer vision, OCR, and data-processing pipelines into production applications.

Experience

Ingeniería Digital

May 2026 – Present

Software Engineer

Honduras

- Built an AI-assisted medical documentation platform from scratch, reducing post-surgical report preparation from approximately one week to 1–2 days, with final document generation completed in under one minute.
- Architected secure full-stack workflows using React, Next.js, TypeScript, PostgreSQL, Auth0, and AWS S3 for document upload, retrieval, OCR, AI processing, editing, versioning, and review.
- Integrated Amazon Textract and OpenAI APIs into document-processing workflows, transforming unstructured clinical records into structured, reviewable documentation.
- Developed client-facing and administrative interfaces for a vehicle-assessment platform using React, Next.js, TypeScript, PostgreSQL, AWS S3, Shadcn/UI, and Konva.
- Integrated AWS Rekognition and Gemini Flash into the vehicle-assessment workflow, combining computer vision, VIN-history retrieval, and automated insurance-estimation logic while maintaining human review of AI-generated results.
- Built backend data-acquisition services with Playwright to retrieve, normalize, and validate vehicle information and VIN history from external sources for downstream valuation and insurance workflows.
- Maintained CI/CD and engineering quality workflows using GitHub Actions, Husky, ESLint, Prettier, Commitizen, and automated repository checks.

NOIR

Jan. 2026 – Present

Founder & Software Engineer

Remote

- Designing and developing a cross-platform movie discovery and continuity platform spanning native Apple applications and backend services.
- Architecting Rust services with Axum, PostgreSQL, Redis, authentication, and cloud infrastructure for metadata aggregation, availability tracking, synchronization, and search.
- Designing natural-language movie discovery workflows that translate user intent into structured search and availability queries across streaming platforms, theaters, and devices.
- Owning product and engineering decisions across interface design, application architecture, data modeling, backend implementation, testing, internationalization, and deployment planning.

Gannon University

Aug. 2024 – May 2025

Computer Vision Engineer — Industry-Sponsored Project

Erie, PA

- Built full-stack components of a real-time industrial traceability system, integrating YOLOv8 computer-vision events with backend services, TimescaleDB, Docker, and operational dashboards.
- Developed monitoring and annotation interfaces that allowed operators to review detection events, correct bounding boxes, curate training data, and submit revised annotations for model retraining.
- Integrated distributed C++, Python, and Rust components with persistent data services to support real-time system communication and operational workflows.

Dinant

Jun. 2023 – Jul. 2023

Full-Stack Developer

Honduras

- Led end-to-end development of two production platforms used by two companies, replacing manual operational processes that previously required weeks with automated workflows completed in minutes; systems remain in use.
- Designed relational data models and application workflows for contract management, digital signatures, automated PDF generation, repair tracking, machine maintenance, inventory deduction, and operational reporting.
- Collaborated directly with international stakeholders from requirements gathering through demonstrations, production feedback, and deployment.

Gannon University

Aug. 2024 – May 2025

Research Assistant — Evolutionary Artificial Intelligence

Erie, PA

- Developed a GPU-accelerated 3D multi-agent simulation in Unreal Engine using C++, CUDA, and PyTorch to investigate evolutionary computation and emergent behavior.
- Implemented NeuroEvolution of Augmenting Topologies (NEAT) in C++ and developed procedural simulation environments for repeated multi-agent experiments.
- Research resulted in a peer-reviewed ASEE publication and presentation at a Sigma Xi conference at Penn State University.

Open Source

Copilot-Lualine

2024 – Present

Creator & Maintainer

Open Source

- Created and maintain an open-source Neovim plugin providing interactive GitHub Copilot status indicators and controls for authentication, enabling/disabling Copilot, and logging; received 117+ GitHub stars and contributions from four community developers.

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, SwiftUI, HTML, CSS, Shadcn/UI, Konva

Backend & Data: Node.js, Rust, Axum, REST APIs, PostgreSQL, Redis, Oracle Database, SQL, Auth0

Cloud & Delivery: AWS S3, Docker, GitHub Actions, Git, CI/CD, Playwright, Linux, CMake, ESLint, Prettier

Languages: TypeScript, JavaScript, Python, Rust, C++, SQL, Java, Bash, Lua

Applied AI: OpenAI APIs, Gemini Flash, AWS Rekognition, Amazon Textract, YOLOv8, OCR, Multimodal AI, Computer Vision

Education & Recognition

Gannon University

2025

B.S. Computer Systems Engineering

Erie, PA

- Peer-reviewed publication with the American Society for Engineering Education (ASEE); research presentation at Sigma Xi.
