

Roberto André Mossi Milla

Full-Stack Software Engineer | Product Development | Cloud Applications

mossiroberto0392@gmail.com | +1 (814) 790-1591 | [linkedin.com/in/andre-mossi-803765236/](https://www.linkedin.com/in/andre-mossi-803765236/) | github.com/AndreM222 | andremossi.vercel.app

Summary

Full-Stack Software Engineer building production web and cross-platform applications from frontend architecture through backend services, databases, authentication, cloud infrastructure, and deployment. Experience delivering systems that automate manual workflows, including applications that reduced processes previously requiring days or weeks to minutes. Additional expertise in AI-enabled applications, computer vision, OCR, and data-processing workflows.

Experience

Ingeniería Digital

May 2026 – Present

Software Engineer

Honduras

- Built an AI-assisted medical documentation platform from scratch, reducing post-surgical report preparation from approximately one week to a day, with final document generation completed in under one minute.
- Architected secure full-stack workflows using React, Next.js, TypeScript, PostgreSQL, Auth0, and AWS S3 for document upload, retrieval, AI processing, editing, versioning, and collaborative review.
- Developed client-facing and administrative interfaces for a vehicle-assessment platform using React, Next.js, TypeScript, PostgreSQL, AWS S3, Shadcn/UI, and Konva.
- Built backend data-acquisition services with Playwright to retrieve, normalize, and validate vehicle information and VIN history from external sources for downstream valuation and insurance workflows.
- Integrated OCR, LLM, and computer-vision services into full-stack workflows while maintaining human review and operational control over AI-generated results.
- Maintained CI/CD and engineering quality workflows using GitHub Actions, Husky, ESLint, Prettier, Commitizen, and automated repository checks.

NOIR

Jan. 2026 – Present

Founder & Software Engineer

Remote

- Designing and developing a cross-platform movie discovery and continuity platform spanning native Apple applications and backend services.
- Architecting Rust services with Axum, PostgreSQL, Redis, authentication, and cloud infrastructure for metadata aggregation, availability tracking, synchronization, and search.
- Own product and engineering decisions across interface design, application architecture, data modeling, backend implementation, testing, internationalization, and deployment planning.

Gannon University

Aug. 2024 – May 2025

Computer Vision Engineer — Industry-Sponsored Project

Erie, PA

- Built full-stack components of a real-time industrial traceability system, integrating computer-vision events with backend services, TimescaleDB, Docker, and operational dashboards.
- Developed monitoring and annotation interfaces that allowed operators to review detection events, correct data, and submit revised annotations for model retraining.
- Integrated distributed C++, Python, and Rust components with persistent data services to support real-time system communication and operational workflows.

Dinant

Jun. 2023 – Jul. 2023

Full-Stack Developer

Honduras

- Led end-to-end development of two production platforms used by two companies, replacing manual operational processes that previously required weeks with automated workflows completed in minutes; systems remain in use.
- Designed relational data models and application workflows for contract management, digital signatures, automated PDF generation, repair tracking, machine maintenance, inventory deduction, and operational reporting.
- Collaborated directly with international stakeholders from requirements gathering through demonstrations, production feedback, and deployment.

Gannon University

Aug. 2024 – May 2025

Research Assistant — Evolutionary Artificial Intelligence

Erie, PA

- Developed a GPU-accelerated 3D multi-agent simulation in Unreal Engine using C++, and CUDA to investigate evolutionary learning and emergent behavior.
- Research resulted in a peer-reviewed ASEE publication and presentation at a Sigma Xi conference at Penn State University.

Open Source

Copilot-Lualine

2024 – Present

Creator & Maintainer

Open Source

- Created and maintain an open-source Neovim plugin providing interactive GitHub Copilot status indicators and controls for authentication, enabling/disabling Copilot, and logging; received 117+ GitHub stars and contributions from four community developers.

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, SwiftUI, HTML, CSS, Shadcn/UI, Konva
Backend & Data: Node.js, Rust, Axum, REST APIs, PostgreSQL, Redis, Oracle Database, SQL, Auth0
Cloud & Delivery: AWS S3, Docker, GitHub Actions, Git, CI/CD, Playwright, Linux, CMake, ESLint, Prettier
Languages: TypeScript, JavaScript, Python, Rust, C++, SQL, Java, Bash
Applied AI: OpenAI APIs, Amazon Textract, OCR, Multimodal AI, Computer Vision, YOLOv8

Education & Recognition

Gannon University **2025**
B.S. Computer Systems Engineering *Erie, PA*
• Peer-reviewed publication with the American Society for Engineering Education (ASEE); research presentation at Sigma Xi.
